HelmholtzZentrum münchen

German Research Center for Environmental Health

- Efficiently use scarce and scattered information available
- Reduce animal testing - use in silico and in vitro information on related compounds.

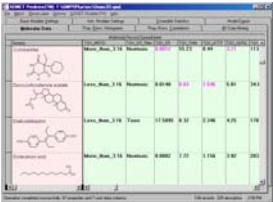

- Practical guidance to integrated risk assessment
- Full risk assessment for four compound classes (incl. PFC)
- Explicit uncertainty in data and in models
- Applicability domain
- Exemplify integration of information for risk assessments for large numbers of substances.
- How to use non-testing information for regulatory decision

FP7-funded 2009-01-01 end: 2012-12-31

ITS

Method	Costs	Time	Quality
Blind <i>in-vitro</i> testing of all compounds 			
Blind <i>in-silico</i> testing of all compounds 			
<i>in-silico</i> testing plus intelligent testing of selected compounds  + 			

What compound to measure?

What property to measure?

What property to predict?

What property can be predicted from another one? -> Knowledge

The accuracy + AD has to be estimated in the end !

Properties of molecules

- Data are lost after publication of an article
- The original sources of data are difficult to track
- The conditions of experiments are frequently not provided
- The conversion between different units is error prone
- Current databases do not allow community correction of errors
- The tracking of changes (by users) is required

Models

- Most published models are never used
- Implementation can be as difficult as new model development
- Different implementations can produce different results

- “Wiki” approach to data handling
users can add, modify and delete data
- Mandatory reference to an origin of information
each record in a database should contain a reference to a source (article, book, proceeding or even personal communications), where the data were published
- Storing rich information
we store measurement conditions to increase data quality
- Several tools to support decision making
integration with other web-services (validation of molecule names against PubChem database, automatic fetching of article information from PubMed), duplicate records management
- Aimed at model building
convenient to build training sets from data - filter by property, article and export data either to internal modelling tools or download as Excel file

Model name: BarunMPBP.BP-PERFORCE-28apr10v1 [rename]
 Public ID is 2627848
 Predicted property: Boiling Point
 Training method: ANN
 measured in °C

[EState]

Correl. limit: 0.95

Supersab, 1000 iterations, 3 neurons
 5-fold cross-validation

66 filtered descriptors
 Supersab, 1000 iterations, 3 neurons

Calculated in 68 seconds

Data Set	Original \mathbb{W}			Recalculated \mathbb{W}		
	R2	RMSE	MAE	R2	RMSE	MAE
Training set: BarunMPBP.BP-28apr10v1-93 (93 records)	0.84	32.40	20.88	0.85	31.90	20.17
Test set: BarunMPBP.BP-PERFORCE-28apr10v1-25 (25 records)	0.77	24.54	20.23	0.80	22.07	18.07

Model name: BarunMPBP.MP-PERFORCE-28apr10v1 [rename]

Public ID is 5666671

Predicted property: Melting Point

Training method: ANN

measured in °C

[EState]

Correl. limit: 0.95

Supersab, 1000 iterations, 3 neurons

5-fold cross-validation

87 filtered descriptors

Supersab, 1000 iterations, 3 neurons

Calculated in 35 seconds

Data Set	Original \mathbb{W}			Recalculated \mathbb{W}

Open Positions

Marie Curie Initial Training Networks (ITN) are aimed at improving the career perspectives of European researchers who are in the first five years of their career by offering structured training in well defined scientific and technological areas as well as providing complementary skills and exposing the researchers to other sectors including private companies.

A number of open positions is available within two conceptual work packages listed below

The positions are available within two workpackages

WP 1 - Urgent problems of QSAR/QSPR modeling for REACH

WP 2 - Computational and in vitro screening methods for nano-materials

There are

one 1-year duration **ER (Experienced Researchers)**, postdoc position) position,

still **2 of 11 Long Term Fellowships (LTF)** (ESR positions, Early Stage Researcher, PhD positions), each one of 36 months duration, and

37 Short Term Fellowships (STF) (ESR positions), each one of 3-12 months duration.
